BLISS' WORK

may prove the greatest social innovation of modern time. It has been praised by eminent scholars. Some of its fantastic aspects are:

1. A simple symbol writing, typing, and printing for communication, commerce, industry and science, that can be read in all languages — without translation.
2. A simple symbolic logic which even children can learn to use in their daily problems.
3. A simple semantics for recognising the dangerous words of demagogues and dictators in the homes and nations.
4. A universal natural ethics encompassing all religions.
5. The biochemical discovery that cells act ethically in all creatures.
6. The archeological discovery that old stone age man was not a killer of his fellow-man. Cannibalism and war began with new stone age man by the introduction of dangerous words.

For free informative literature send in postage: 2 international postal coupons for surface mail (6-8 weeks), or 6 coupons for airmail (4-6 days) from Australia to Europe and America.

Sydney 13 May 71

Here is a story that may mark a turning point in your life - for the exciting better And here is how you may go about it:

1. Read first my report about your report on "The New Genetics " It may make you stark raving mad about me.
2. Then read my letter to the professors, science writers and editors who combined in writing the Life Science Book "The Cell." It may make you wonder why all the professors have not uttered a word about the wonder of wonders.
3. Then read the sample pages on "Is Ethics perhaps a natural Force like Electricity?" from my new book not yet published It may make you again stark raving mad, not about me, but about all the "bio-wise guys" on the biological bandwagon, who have not seen what every intelligent boy or girl can see, once it has been pointed out to them.

And if you really get mad about all this, it may indeed mark a turning point in your life You may start giving lectures and writing books, and answering the supreme questions mankind has asked since the beginning of language:

"Why are we born?" - "Why are we here on this planet?" and "Why do we feel the urge to give new life to our children?"

Mind you, this is no religious blabla. I despise the religious money makers. I am an honest scientist, and hence I must rebel against a lot of scientists who tell us that this Universe is the product of chaotic chance. Damn it!

Read the enclosures no. 1, 2 and 3 and write to me if you want to hear more about it. Hoping that you will do this, I greet you from far-away Australia

Sincerely yours

C.K.Bliss, B.Sc.

April 1971 Semantography Series No. 329

"TIME" REPORTS ON "THE NEW GENETICISTS" AND
BLISS REPORTS ON THEIR BIOLOGICAL BLUNDERS

Semantography is a simple semantics for uncovering the faults and the frauds with words even in scientific pronouncements. Inventor of Semantography is C.K. Bliss who writes this report.

A semantic analysis of the "Time" report written for the editors and writers who combined to report the pronouncements of the biologists, biochemists, geneticists, molecular biologists and others on the biological bandwagon.

Addressed to the "Time" editors and writers as named on Page 1 of the issue of April 19, 1971.

Senior Editor Leon Jaroff (1), Science Writer Frederick Golden (2), Sydnor Vanderschmidt (3), Alan Anderson (4), John Wilhelm (5), Jere Donovan (6), Nina Lyn (7), Medicine Writer Peter Stoler (8), Gail Lowman Eisen (9), Douglas Gasner (10), Behaviour Writer Virginia Adams (11), Erika Sanchez (12), Mehrrens Galvin (13), Religion Writer Mayo Mohs (14), Richard Ostling (15), Margaret Lynch (16), and picture collector Evelyn Merrin (17).

Dear Ladies and Gentlemen of the editorial staff of Time Magazine,

Greetings! My congratulations to your marvellous, knowledgeable and excellently researched and written Report on "The New Genetics - Man into Superman" as titled on the frontcover. It is the best summary I have read so far, and I am going to keep it and to draw strength from it - for my own summary that follows later.

Allow me now to enter your lives and your consciousness ("Who in hell is Bliss?") and the hallowed halls of the Time Life Building, by claiming a distinction which should indeed open for me the doors and the ears of "Time". The distinction is: I am a Jew, one of those fellows, who after thousands of years of persecution have set out to prove to the goyim that what they can do, we can do better.

Indeed, as one Time writer said in Time, a study of the Book Review section of Time may make people believe that America's literature is written and dominated by Jews. Indeed, if 4 books are reviewed in one issue, chances are that 6 Jews were involved as writers and reviewers.

And this holds true even with your report on the professional and professorial pronouncements of the biologists, biochemists, embryologists, geneticists whose wobbly "wisdom" you have dutifully reported and commented upon. I count among the quoted "biochochems" (biowiseguys in Hebrew) 21 with distinct German-Jewish names (the Kornbergs, Nirenbergs, Lederbergs, Feinbergs, Knishesbergs, the Kohne, Kahn, Kass and Kesslers, the Augensteins and Beigelsteins, the Spiegelmans, the Nadlers and Shapiros, etc. etc.) against 28 names of Anglo-American origin, among which I do not dare to guess how many Jews from Eastern Europe hide under their anglicized names. All in all, much too many. But why so many Jews? Here is why.

Allow me to quote for your enlightenment (in case you don't know it already) from a recent book by an American writer (meaning a Jewish writer of course). The title "Nude Croquet" a collection of stories (partly pornographic, partly on literature and other subjects) and written by Leslie Fiedler (another fiddler from the roofs of Brooklyn or the Bronx) and published by Secker and Warburg.

The relevant story is about Milton Amsterdam (who else but a Jew goes around with such a name) who is a poet and critic and a visiting lecturer on literature. His counterpart in the story is Hank the poet manque, and the whole story is about "the importance of being Jewish or not Jewish in American literature and science". And here is poor Hank who complains passionately:

"I respect the Jews. I love them, God damn it; but they are in and I am out - they have inherited the earth. If you are not a Jew or a goddamn fairy you can't get published in America. Who the hell does this country belong to? This is a Jewish Age - an Age of Jewish art and Jewish science - Psychoanalysis, Sociology, etc. But we don't understand

understand it, Amsterdam - we others - it doesn't speak our language."

And language is the word, because they do it all by language, and here is where I come in as I shall soon show. How to defeat this racket which soon will erupt in a new wave of antisemitism America has never known. It may even lead to the burning of books. "It can happen here." How to fight this racket? By joining it? No, but by joining a Jew who knows his fellow buchirim and his fellow Bnai Brith brethren, a fellow who has seen through their fraud with words and who is uniquely suited to defeat them for the sake of all decent Jews in America and elsewhere.

"Aha," you might say, "just another Jew who tries a new way to gatecrash American publishers and the book section of Time." Not so, my Friends. Well, you might say, here we have an old phenomenon so well known among Jewish enlightened intellectuals. The word is "Selbsthass" - Selfhate, a hate of all that is Jewish and which leads sooner or later to the (usual) Catholic priest and a conversion. Not so again, my Friend. I am a good Jew, and I love my people. But it was in Dachau and Buchenwald and in the Japanese ghetto of Shanghai where I began to think whether perhaps we Jews have to blame ourselves - a little, a tiny bit of little - for the hatred, for our pushing perhaps a little too vehemently into the public limelight for better or for worse, usually for worse.

Look at America today. Kissinger making foreign policy, and Burns making fiscal policy, and Friedman making all business people looking like fools and also all economists who are usually Jews too - and because of this, Friedman gets the limelight in the columns of Time. But - when his advocated policy of increasing the money supply by just 2% failed, because his prediction that inflation will vanish and business will pick up, just didn't come true, and his adversaries saying to him "Now Friedman, where is your new economic theory? Burns has done just what you told him to do with the money supply, and inflation did not vanish and business did not pick up - what do you say now?" Did Friedman admit the failure of his theory? No just economist will ever admit failure. He will find enough words to justify it. And this is what Friedman has said (according to Time): "The measures advocated by me came too little and too late. If they had not been adopted, the inflation today would be greater and business would be deeper down in the doldrums."

What does all this mean? What does it mean that Jews have usurped almost totally the science of psychoanalysis and psychology, the science of sociology, the science of atomic physics, and now the science of molecular biology? Why, why, why? I'll tell you why, because I lived through all of it. I was a student in Vienna when Freud's theories burst upon the scene with a thunderstorm of outrage. But few people took the trouble to read what Freud had really said? They all heard about Freud from the Jewish new medical charlatans, the psychoanalysts and psychologists. And what did they tell the people of Vienna? Why, don't you know? They told them that a baby boy has only one desire: to have sexual intercourse with his mother, and that he wants to kill his father, and other such nonsense. No wonder that they all got the limelight in lecturing and writing about the new science of psychoanalysis. Take for instance one disciple of Freud whom you in America know so well. Take Wilhelm Reich of Vienna. How I know Willy. We were both soldiers of the same company during the first world war. We slept in the same bed, and sometimes a woman between us, when we were quartered in peasant houses. I know Willy well. And I know his books about the orgasm which he nicely combined with communist theories, because communism was the rage then, and Russia the savior of the world.

But when Reich came to America the rage was atomic physics, and Reich had to get onto this bandwagon too, combining psychoanalysis with atomic physics and biology in the bargain. He invented the "bion." What is a "bion?" Why don't you guess? A "bion" is a biological atom. And why not? Considering the fact that the Jewish nuclear physicists invented a host of atomic particles, the nuon, the meson, the pion, and other non-existing entities which they all invented from some photographic streaks in the Wilson cloud chamber and the Hydrogen bubble chamber, entities which others have denounced vigorously, why should not Reich invent the "bion." But he went a little too far. Psychoanalysts make good money. Indeed they are today a status symbol of affluent America. Every family must have one. So Reich built his tinsplate box to catch the bions emanating from patients who were sick of imaginary diseases talked into them by psychoanalysts. And here he got too far, though thousands of students crowded his laboratory to sit in the bion chamber and to lap up his wise words. May be he had made enemies among his own colleagues who may have denounced him. He was arrested, and charged with fraud and went to prison. God bless America for this!

Now let's take a look at the atomic physicists. Almost all of them Jews, beginning with Einstein, Oppenheimer, Lise Meitner, even Fermi the Italian was a Jew, Szillard and the others who didn't do any progressive work in the laboratory, but talking

mostly, culminating in the greatest talker of them all: Professor Teller of Budapest. How I know the Jewish scientists of Budapest! I call Teller, the "Tall Tale Teller" the "Fater" of the Atomic Bomb. And here I am going to tell you a Disney-land tale and true too, not of the legendary past, but our recent past and present, a tale which will burst upon all science writers of Time like a true hydrogen bombshell. I am going to tell you the tall tale about the "Hydrogen Bomb."

But who am I to tell you something about the hydrogen bomb which you surely don't know, and which would be revolting to every science writer who ever wrote about the "nuclear weapons"? So let me tell you something about myself.

I was born when radium was born. As a very little boy of 3 my father told me that one gram radium could drive an oceanliner across the Atlantic and back. It was for me a great wonder. My father manufactured electric cells, and already as a toddler I tinkered in his workshop, mixing chemicals and making my electric train run and a tiny electric bulb glow. Wonder upon wonder how chemicals can turn into mechanical energy and into light energy. And so the overwhelming desire for me was to become a chemist, but a chemist with a purpose, a chemist who can bring better water, and better medicines, and better amenities to mankind, in short a chemical engineer. No wonder that I was the best in chemistry and physics in the highschool so good that my teachers used me as their assistant who prepared all the experiments for the next lesson, and who was never examined, yet got the best marks. At home I had a chemical laboratory and frightened the neighbourhood with my explosions and with the stench of my gaseous experiments.

And believe it or not, as a boy of 13 (in 1910) I made a small "atomic bomb" with a mushroom going skyhigh, that is I made a mushroom cloud alright, a sure sign according to the many science writers (as for instance Lawrence of the New York Times who never had any science education, and who admitted that he wrote the story of the mushroom cloud over Hiroshima weeks before it really happened. He was commanded to Guam and filed his report even before the bomber took off, telling of the sure sign, the mushroom cloud) the sure sign for any science writer of Time, Newsweek, and all the others on the nuclear bandwagon.

Well, they are all mistaken; ask any ordnance officer and he will tell you that any explosion of conventional explosives as for instance TNT will create a mushroom cloud - provided there is no crosswind and the gases can go straight up and blossom forth in a big mushroom. Now please look up your own Time report about the first atomic test in the Nevada desert where thousands of American soldiers crouched in shallow trenches right in the centre of the explosion. They all came out "radiating" health. Now take a better look at the picture in Time. You will see 4 thin smokes going up straight from the ground: smoke rockets. Why are they there? Why? To test whether the smoke will go straight up, which would mean there is no crosswind and the mushroom will blossom forth. With cross wind there would not be any mushroom and hence no atomic bomb. Now take a look at the reports about China having got the "bomb" and look at the beautiful mushroom they have produced. Who are they? THEY are Dr. Tsien and Dr. Chao, formerly professors at American universities and knowing exactly how to produce a mushroom cloud. And take a look at the book "How China got the bomb" by the journalists Ryan and Sumerlin - surely atomic scientists. And now - hold on to your seats - read this quote from Time (I have it somewhere, but your library researchers will find it in no time in TIME issues of previous years) where your science writer says this nonsense:

"A Maoist mushroom cloud proved to the world that the Chinese had succeeded in the summa of atomic art - building a hydrogen bomb."

Mind you, your science writer did not say that it was just an old-fashioned uranium fission cloud which produced those great mushrooms at Hiroshima and Bikini. Your science writer had the temerity to state with conviction that it was a hydrogen bomb, something utterly different from the old-fashioned uranium bomb. In a hydrogen bomb deuterium nuclei are fused into helium nuclei with devastating results for whole countries and whole populations. Well, it's all a lie!

But who am I to tell you the truth? Well, I claim to have four distinctions not to be found together in any other man. This classifies me immediately as the grossest liar of all. But just wait and hear about my 4 distinctions. What are they that set me apart from all the other atomic blabberers? Here they are:

Distinction 1: I am a qualified research chemist, and I am an old man. Therefore I have seen many times how today's theories turned into trash to-morrow.

Distinction 2: I was for a number of years chief of the patent department of a large firm and have defeated the scientific expertises of many a professor in the patent courts.

Distinction 3: I am the inventor of the new semantics which can uncover even scientific half-truth and full lies, and I have studied atomic physics since 1919 when Rutherford split the atom. I followed all the new atom-smashing news. And lastly

p.t.o.

Distinction 4: I was in the hands of the Japanese when the atomic bomb was dropped over Hiroshima and Nagasaki.

Now try to find a man in the world who has these 4 distinctions combined. You can't find any, because so far I am the only man who has invented semantography, the new simple semantics to uncover the frauds of laymen and learned men alike.

Well, since the atomic bombs were dropped and the Americans came to Shanghai, and brought their magazines with them, notably LIFE, since that memorable year of freedom from oppression 1945, I have examined (until today in 1971) every bit of evidence produced by our nuclear experts and science writers, and I have found - and I have proved it devastatingly - that the atomic device that disturbs our lives, is not the reactor, not the generator, not the moderator, not the detonator;

But the EXAGGERATOR.

And for this gross crime, for making all mankind jittery, for making all young people abandon the idea of a life of hard work and honesty, because "make merry before the bomb will kill us all" for this gigantic lie I make first responsible the nuclear experts, the professors and science writers be they Jews or Non-Jews, and then you my dear fellows of the press and the mass media, because you are lapping up truthfully all their lies and faithfully all their frauds. What in hell do you know about atomic physics and atomic weapons? I will tell what. All you know, and all the expert professors know, is hearsay, printsay, readsay, liesay. Hugh, I have spoken! And I am going to prove it, and I have proved it in my books.

But how can I prove it to you as you are not qualified chemists or physicists? Just listen to me and just think that may be that Jew has something to tell us, something we don't know. And indeed I have.

Have you ever wondered why the Atomic Energy Commission never - NEVER - uses the term "hydrogen bomb"? Why? Why do they only speak of a "thermonuclear device." What means "thermonuclear?" It means that heat (thermo) is generated when something happens within the nucleus. If this is so, then the striking of a match is also a "thermonuclear" reaction. An explosion happens with electrons jumping wildly in and out of their orbits, and protons and neutrons and photons being wildly emitted, absorbed, recombined to new chemicals and light and heat being emitted in blinding glare - indeed a match too is a "thermonuclear" device. But what is the nucleus really? Do you know that the majority of physicists think that the nucleus is a lie. They are the wave mechanics, who think that the proton, electron and the over hundred atomic particles are all honourable lies. For them, the atom is nothing but a bundle of undulations, a "wave packet." Don't talk to them about the "nucleus." Are you now realizing the thousands of nuclear lies being bandied about?

Or have you ever wondered why 13 bombers with "hydrogen bombs" in their bellies crashed and nothing happened, but a "crater" a few yards wide and negligible radio-activity? Ah, said the science writers of Time, Newsweek and the other magazines. This is because the bombs were not "armed!" Don't swallow this nonsense. We were told that the hydrogen fusion into helium occurs in the following way: TNT is exploded, which in turn explodes Plutonium by fission, which in turn explodes hydrogen by fusion. And the A.E.C. admits that at every hydrogen bomber crash the TNT exploded. But this catastrophic explosive compression must have exploded plutonium and this must have fused hydrogen with devastating results. But nothing happened? Why? Because the "hydrogen bomb" is one gigantic lie. Now, don't believe me, but you will have to believe eminent physicists who know something. And here is what I have done: in my elaborate explanations I have quoted ^{a number of} an eminent physicist who have said what I am trying to tell the world. And in this respect I quote Professor E.W. Titterton, Professor of Nuclear Physics of the Australian National University of Canberra. He has written books and many articles on nuclear physics. He is a sober expert and here is in summation what he had said.

Hydrogen bombs explosions started in 1952 and stopped in 1958. Three years later Prof. Titterton said in an article in the Sydney Morning Herald that the term "Hydrogen Bomb" is a misnomer. A true hydrogen bomb is one by which deuterium is fused into helium nuclei with release of energy. And to this Prof. Titterton said this:

"A true hydrogen bomb - none has yet been made."

You go and ask him! When did he say this? Three years after all "hydrogen bomb explosions" have been stopped. His article bears the date 27th October 1961. Bingo! Isn't this a nice hydrogen bombshell for all science writers? And I have a dozen and more similar sober quotations from other sober professors who all denounce and deplore the doomsday predictions of the scoundrels who frighten mankind with such lies. And among the denouncers of those professors of doom, and science writers of scientific lies is Prof. Teller himself, when he debunks (he has to) in his book "The Legacy of Hiroshima" the lies about wholesale des-

struction of whole countries and the wholesale poisoning of whole populations - even by his own hydrogen "child!" How he detests being called the "father" of the hydrogen bomb. Why? Because all he has done was to produce the calculation of how much energy could be produced by fusing hydrogen nuclei into helium nuclei and making the wild guess that, may be, if we could get a quick fusion by employing a plutonium fission bomb as a "trigger, we might get a mighty hydrogen "explosion."

Do you want to hear more? I shall be delighted to send you more. Just ask for it. And with this, let me end my venture into nuclear physics, which I have started to point out why mostly Jews have wedged themselves into this sensational science, for sheer sensationalism - and of course salaries. Where are they now? They are very mute. Why? Because all their fanciful predictions of the millenium of unbounded energy have all proved lies. Nuclear reactors have been built, and are still being built - with devastating results. The gigantic masses of cooling water needed kills off all the fish, because the heated-up water contains less oxygen. And the more devastating results are that the atomic wastes have to be buried in the ground and in the ocean with the catastrophic possibilities that leakages may occur - and will occur. All the stories of nuclear explosions moving mountains and excavating harbours - all have turned out to be lies.

I **MUST** blame the Jewish scientists who jumped onto this bandwagon. They go where the money is, and money makes them give lectures, demand higher salaries and tenures at university and research institute, make them write books, make them get royalties - and make them famous with tremendous satisfaction of having proved to the goyim that they can do it all better. And I **MUST** blame the gentils too.

But now, the bubble of the nuclear millenium has burst, and our hopeful young Jewish scientists are looking out for other sensational fields of sensational research. And molecular biology is the answer. And here is where you come in with your report on "The New Genetics - Man into Superman." You have believed the many Beigelbergs - you had to, and you have commented on what they told a gaping world. But how much of their tales are just tall tales - tales to keep them in clover? And here is where I come in - not only by denouncing and debunking their claims, but by doing something much better - by overturning all their theories.

Because I am a Jew with a difference, a Jew who has gone through the persecutions by the Christian children at school, a Jew who has already as a boy refused to believe that this universe of ours is governed by blind forces of brute destructiveness by which only the fittest could survive, a Jew who has - even in the concentration camps refused to believe that goodness and kindness and ethical behaviour are non-existent. I am a Jewish scientist who has searched for ethics in our Universe - and I have found it. When? I found it and published my first book in 1949. But this large book (first published in 3 volumes) contains so much of my semantics that little space was left for my findings of ethical behaviour. Moreover, this my large book was written in scientific language, not in popular language. Why not? Because I had to approach first the professors and scientists, and to be popular in science is not popular with the scientists. But now I am going to publish my last book for the intelligent man and woman, boy and girl, and there I am going to tell them that all they have been told in school and university about the sciences of biology, and anthropology, physics, etc. are based on false theories, catastrophic theories which have brought about the grotesque spectre of human self-destruction. And here is where **TIME-LIFE** comes in.

In 1966 you produced in the **LIFE SCIENCE LIBRARY** a new book titled "**THE CELL!**" I was enraged reading of the nonsense of the biological scientists and I sat down to write an answer directed to

"To the Scientists, Consultants, Writers and Editors of **LIFE**" But I finished printing my letter to them half a year later, but then all my fury went out. And I realized that the professors and scientists will never, never admit that they have not seen what was there for them to see. I put the letter aside. But now your new Essay in Time appeared, and my fury rose again, not against you, but against the many Jewish scientists who are again exploiting sensational possibilities of making new men out of old men - and getting great fees for doing this. Not that they can do it. All they can do is talk about it.

So, please receive my letter to Life written 5 years ago. And please receive sample pages from my new book which will give you an idea. This new book is not yet on the market, and I don't know when it will ever be, because I am an old man of 74, but still burning with youthful rage, which can kill me to-morrow.

Here is a story which may mark a turning point in your life. I am standing near my grave. All I want is, as expressed in the title of page 283 of my new book, which title runs: **WANTED DESPERATELY: AN HONEST SCIENCE REPORTER.** Will you be this person? Then ask for more to hear of my work. I greet you all in sincerity

C. K. Bliss
